                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ytm=ytm:1:0.9:1000;PNr="";                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3.2 結果

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            12598
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 12595

12642 (a.) 誤受理は、(1)-(4)すべてで無かった(PRO), なお(2)で1/5非指定数字であるが指定話者なので1/5以下の非数字は受理する。
12643 (a.) 誤受理は、(1)-(4)すべてで無かった(PRO)。
12645 (b.) 誤棄却は、(1)-(4)すべてで無かった(PRO)。
12645 (c.) 指定語者が全て指定数字を発した(1)の場合、受理が66.5%(TR664)、受理保留が13.6%(SA136)。
12646 (d.) 指定話者が1/5非指定数字を発した(1)の場合、受理が66.5%(TR665)、受理保留が13.5%(SA335)。1/5非指定数字なので答認。
12647 (d.) 指定話者が12人4)では正葉却が97.1%(TR971)と98.0%(TR980)である。
12647 (d.) 指定話者と25年指定数字の描からは(1)誤棄却はあっても良いが誤受理は無くしたい。一方、実用面からは(11)正解入力の場合(1)の受理率は高くしたい。
12649 (f.) セネュリティの面からは(1)の場合、誤受理が6.2%(PRO2)あったが、「指定話者は数字間違いが少なければ変理する」という観点からは
12650 容認できる。(1)と(11)の両面で答認できると考える。
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    LA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 LAR

使っている。今回は汎化能
                                                                                                                                                                                                                                                                                                                                                                                                                       2. 評価実験を行う前に、まず、話者CAN2,数字CAN2,話者数字CAN2の分類性能を上げる。
パギング学習で、alpha=1.60と等、与えられたデータの内、約80%=1-exp(-1.6)=0.798
数りを予想することとなり、予測性能が良くなる可能性がある。
(なお、alphaを大きくすると未知データに対する現化能力の見限りのバッツキが大きく
道常は、alphaを大きくすると未知データに対する現化能力の見限りのバッツキが大きく
通常は、alpha=0.7として50%等習し、数り50%を予測するものを使っている。今回は汎化
あまり重視しないのでこれでやってみる。)
                                                                                                                                があるテキストを指定するか問題である。文献[2](松井、古井:テキスト指征形名者認識、1996)では、20.40文字数のテキストからな谷学習ピテストデータセットまかなり類似度が低いテキストから構成されている。「テキスト照合では、指定された・デ・ストとは現なるテキストを発声した場合」と書かれているがどのように関心を示えたしていて、文脈からすると用意したテストデーをのうちのプルラに関なるからったと考えられるが、それのの類似に対してデストデーをのうちのではか異なるものをしたと考えられるが、それの類似度はかなり低いと考えられる。
・報に、テキストを正しく発声したかどうかの判断は、指定テキストとテストト・キストを正しく発声したかどうかの判断は、指定テキストをデストト・キストをデルの対似度が影響する。下の実験では、多段照合を行っても、全文字数らとの区別はできない。
                                                                                                                                                                                                                                                                                                       田舎い、

1.3-2 考察

重ならない。受理のしきい値はpa=0.4、乗却のしきい値pR=0.2程度とすれば良い。

2.数字隔合では第3ステップから、受理すべき事後確率と乗却すべき事後確率の95%誤差範囲が重ならない。受理のしきい値tpa=0.63、乗却のしきい値pR=0.46程度とすれば良い。

ならない。受理のしきい値tpa=0.63、乗却のしきい値pR=0.46程度とすれば良い。

なっない。受理のしきい値tpa=0.63、乗却のしきい値pR=0.46程度とすれば良い。

なると期待できるので最後の対に0.0.99の例はその場合を示す。 配者照合では受理となるが、数字

配合で乗却になるので、結果として乗却とする。 判定数字数は3以上であれば良い。実用的でもある。

<method>=0 後来のようにアの正例の下均ymeanp[m]と負例の平均ymeanN[m]の PNr で内分する点をyth
<method>=1, cytha>>0: -ythaからythaまでをcnyth>等分してythの値とし、p_[FN}とp_{FP}の射
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (1.1) (1.1) は指定語者と指定数字列の場合 (rico_0) のみ受理され、受理と葉却は第2数字目からしきい値で分付ることができることを示す。
(2.2) (3.1)と(4)はそれですってを示す。
第1数字からしきい値による受理と葉却が可能であるが、デキスト独立は第2数字から可能となる。
(3.1) (4.4) (4.4) とのでは、 4.2) を理と葉却が可能であるが、デキスト独立は第2数字から可能となる。
(3.1) 音数学でANN2を使う場合、と語名CNN2と数字でANN2を使う場合との比較は、
・前者は学習に降雨がかかるが、後名CNN2と数字でANN2を使う場合との比較は、
・前者は学習に降雨がかかるが、後名CNN2と数字でANN2を使う場合との比較は、
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           結果を示している。しかし、上のNEWの方法の結果の方が良かったので以下では検討しない。
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              本バージョンでは、p_{FP}とp_{FW}の分散は、FPとFWの各データに対する分散として求めた
NEW: v_{FP}=(\sum_m ( p^{m}_{m})_{FP} - <p^{m}_{m}_{m} > (p^{m}_{m}_{m})_{FP} ) / sum_m n^{m}_{m}_{m} = (m)_{FP} / sum_{m}_{m} = 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (MはCAN2^mの個数)

(1)Bayes法では棄却域がかなり大きく、受理機と棄却級と数学数の増加とともに愛動す。
(2)Gibbsの愛想域と乗却域は数字数の増加とともに減少し、愛難、乗却はより圧縮になる。
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    tmp/testsd_stat.dat ..12voicedata/allpole/test_sd_riC0_0.9ytml_0.9_bayes.dat

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ir5.24e-01<PIrth<minPIv8.12e-01

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    #maxP                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ir4.35e-06<PIrth<minPIv1.00e+20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ir2.15e-06<PIrth<minPIv1.74e-04

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     14680
